

# AI FUNNEL MACHINE

## Personal Injury Law Firm Edition

The firm that calls first wins the case. You need to be first, every time.

---

# The Opportunity

---

A personal injury lead has a shelf life of about 10 minutes. After a car accident, someone fills out three forms from three different firms at once. The firm that calls within 5 minutes wins. The firm that calls 45 minutes later gets voicemail.

Most PI firms — even those spending \$20,000/month on Google Ads — have intake response times of 30 minutes to several hours. That gap is costing them signed cases worth \$30,000–\$100,000 each.

**This model closes that gap entirely. AI contacts every lead in under 60 seconds, qualifies them on the criteria your attorneys care about, and books consultations directly onto the calendar.**

## Who Is the Client

| Detail         | Profile                                                         |
|----------------|-----------------------------------------------------------------|
| Business Type  | Personal injury law firm, 2–15 attorneys                        |
| Revenue Range  | \$1M – \$10M/year in settled cases                              |
| Practice Areas | Auto accidents, slip & fall, workers' comp, medical malpractice |
| Location       | High-volume states: FL, TX, CA, NY, GA                          |
| Ad Spend       | \$5,000 – \$50,000/month on Google Ads                          |

## The Core Pain Point

- PI leads are hyper-time-sensitive — delayed follow-up means a lost case, not just a lost lead.
- Intake teams are human — they're unavailable nights, weekends, and during busy periods.
- Firms spending \$30K+/month on ads still lose 40–60% of leads to slow response.
- One missed signed case can represent \$30,000 – \$100,000 in contingency fees gone.

## The Offer

---

*"AI-powered intake system that contacts every lead within 60 seconds, qualifies them on your exact case criteria, and books a consultation directly onto your attorney's calendar — so your intake team only handles warm cases that are already moving forward."*

## Pricing

| Revenue Stream             | Amount                                     |
|----------------------------|--------------------------------------------|
| Setup / Onboarding Fee     | \$3,000 – \$5,000 (one-time)               |
| Monthly Retainer           | \$3,500 – \$6,000/month                    |
| Ad Spend (client pays)     | Already spending — managed separately      |
| Performance Model (option) | \$300 – \$500 per qualified booked consult |

ROI math: One signed PI case = \$10,000–\$100,000 in contingency fees. Your service pays for itself on the very first case signed from the system every single month.

## How You Get Clients

---

- Cold email from Avvo, FindLaw, Martindale-Hubbell, and state bar directories — all public, filterable by practice area and size.
- LinkedIn outreach to managing partners and firm administrators — they're reachable and relatively active.
- Google Ads targeting 'PI law firm marketing' and 'personal injury lead generation' — these firms are already searching for solutions.
- LinkedIn content: before/after intake response time data with case conversion lift. Attorneys respect hard numbers, not hype.
- Referral partnerships with legal SEO agencies and marketing consultants already serving PI firms — offer 10% referral fee, they'll send clients.

## Delivery & Operations

---

### Onboarding Timeline

| Phase    | What Gets Done                                                                                                                 |
|----------|--------------------------------------------------------------------------------------------------------------------------------|
| Week 1–2 | Intake script development (compliant — AI qualifies only, no legal advice), CRM integration with Clio/Filevine/existing system |
| Week 3   | Soft launch with close monitoring — QA every AI interaction before going live                                                  |
| Month 2+ | Optimize qualification criteria with attorney feedback, refine scripts, weekly signed-case attribution reports                 |

### Compliance Note

The AI qualifies and schedules only. It never gives legal advice, never discusses case merit, and never makes representations on behalf of the firm. This must be built into every script and clearly stated in your service agreement.

### Tools Needed

- GoHighLevel (AI conversations + calendar booking)
- Clio, Filevine, or MyCase integration for case pipeline tracking
- Google Ads account access (they're already running — you optimize)
- Twilio or GHL for SMS intake automation

## Revenue & Retention

---

## Revenue Projections

| # of Clients | MRR      |
|--------------|----------|
| 3 clients    | \$13,500 |
| 5 clients    | \$22,500 |
| 8 clients    | \$36,000 |
| 10 clients   | \$45,000 |

## Retention & Upsells

- Lead reactivation: run AI campaigns on old unconverted leads sitting in their CRM — signed cases from leads they already paid for and wrote off.
- Reputation automation: post-settlement review requests build Google and Avvo ratings, which feed their organic pipeline.
- Referral network automation: PI firms depend on attorney referrals — build a system to keep them top-of-mind with their referral sources monthly.

**Once you're signing cases for a firm, they won't leave. The ROI is too obvious and the relationship too valuable.**

## Why PI Law Over Real Estate

---

- PI firms spend 5–10x more on advertising than individual agents — budgets are massive.
- Revenue per closed client is 3–10x higher — the ROI case almost sells itself.
- The pain of slow intake is felt every single day, not seasonally.
- Almost zero AI funnel operators targeting this niche — wide open market.

**Bigger budgets. Higher stakes. First mover advantage.**
